

mobila**TECT**

Edge banding
easy • clean • safe

A brand of

Surface Technology GmbH

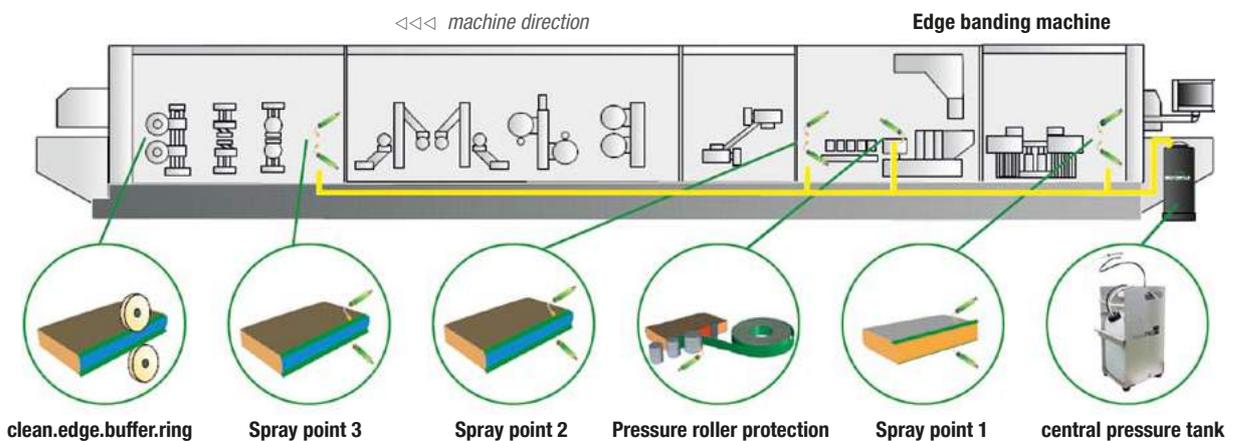

The optimum solution in the woodworking industry.

mobilaTECT is integrated in the edge banding machine and offers an innovative system solution for automatic edge processing.

The mobilaTECT system sprays the Liquid precisely where it is needed in the gluing process. A fine spray mist places the Liquid exactly on the upper and lower edges of the panels. It is used as a separating agent prior to gluing, as a coolant, and also as a cleaner after edge banding.

The integrated pressure tank makes the time-consuming refilling of cartridges obsolete. The reduced spray pressure of 0.5 bars ensures minimal Liquid consumption and neat edges. Milling units and scrapers are prevented from getting dirty, and the manual cleaning of the pressure rollers is no longer necessary.

Cost reduction through centralized compressed-air and Liquid supply with the mobilaTECT system.

One Liquid for the entire working process.

clean.edge.liquid HP acts as a separating agent, coolant and cleaner.

- ▶ VOC-free
- ▶ Non-flammable
- ▶ Cost reduction
- ▶ Quality improvement

Neat edges guaranteed!

mobilaTECT offers a range of further cleaners for the entire woodworking process.
